

AstronSCIENTIFIC offers a Pro-Am automatic 4 port wheel for Optics & Imaging, Rotarion CAM SC kit.

The patented Rotarion plus the Rotarion Cam SC kit accessory, a universal motorized remote wheel for exchanging optics and imaging devices of any kind, for observatory or field portable telescopes, manufactured in Barcelona – EU.

Rotarion + Rotarion CAM SC kit + Celestron C11 Catadioptric
Curtsey of Mr. Tófol Tobal from the Garraf Astronomical Observatory, OAG:
Astrometry & Spectroscopy: SBIG ST7 double sensor camera
Spectrometry: Star Analyzer + ZWO
Viewing: 40mm Eyepiece

The modular platform **Rotarion Eyepiece Wheel base product** is a universal automatic electronic system for changing eyepieces on telescopes of any kind, either controlled remotely with a computer, through a user-friendly windows software named **Rotarion Remote Control** or controlled locally with the **Rotarion Hand Control unit**.

The modular platform Rotarion is equipped with electronics to precisely manage the automatic change of optics, aligning the selected eyepiece with the optical axis of the telescope.

Designed for serious observers, the system provides the ability to view the same sky object with different eyepiece magnifications, ideal for quickly adjust to current seeing.

Selecting the wide field optic, it also works as a finder for relocating lost objects. **Just with a simple Click!**

The **Rotarion Photo accessory** is an electromechanical camera tripod recommended for SCT telescopes offers an automatic shutter compatible with imaging devices with a T-ring, so the user can change telescope magnifications without touching the imaging equipment mounted on the Rotarion photo accessory. Use a versatile camera with or without filter wheel, add a focal reducer, the included prime focus adapter kit set, plus two Barlows/Powermates and the Rotarion plus the Rotarion Photo accessory makes SCT telescopes compatible for planetary and DSO imaging without taking apart the telescope!

The available advanced **Rotarion Autofocus** system accessory automatically adapts the focus to the selected optics and imaging instruments, making them parfocal and can even memorize the user's fine tuning

Combine the Rotarion with the all new Rotarion Cam SC accessory for any combination of optics and imaging instruments. **Now the versatile telescope in a single tube is finally available, either for refractors or reflectors.**

The Rotarion CAM SC includes the **new Rotarion Remote Control Pro software** which provides the ability to fine tune the backlash in any turning direction when rotating combinations of heavy and light weight cameras or any other science devices. The micrometric adjustment of the backlash always guarantees telescope optical axis even with unbalanced camera setups.

Inside the **Rotarion CAM SC accessory box** there is a **complete collection of adapters and tools**: TeleVue IS imaging system, 2" SCT system (2inch 24TPI), metric M48 system, and T2 (M42) system, to make it compatible with any telescope thread, plus 2 rotator adapters (M48) to align imaging sensors when using a 2-camera setup.

"...The first portable telescope for visual, planetary and DSO imaging all in a single set-up.

Big Congrats to AstronSCIENTIFIC !"

*Al Nagler,
Tele Vue Optics, 2019*

Rotarion + Rotarion CAM SC kit + Rotarion AutoFocus + Tele Vue-85 Refractor
DSO: Tele Vue reducer 0.8x - Guiding ZWO+off-axis – Camera ZWO+filter wheel
Planetary: Tele Vue PowerMate 5x – Camera Atik color
Viewing: Tele Vue diagonal 1,25" – TeleVue 40mm Plössl
